In our article entitled “IgE effector mechanisms, in concert with mast cells, contribute to acquired host defense against *Staphylococcus aureus*”, the following incorrect statement appears in the STAR Methods section under the subheading “Mass Spectrometry Data Analysis”: “Searches were performed with full tryptic digestion against the human SwissProt database v2017.06 (20456 sequences and appended known contaminants) with up to two miscleavage sites.” The correct sentence should read: “Searches were performed with full tryptic digestion against the mouse SwissProt database v2017.12 (25293 sequences and appended known contaminants) with up to two miscleavage sites.” The authors apologize for any confusion that may have arisen as a result of this error.
