Asthma—a call for papers

Asthma continues to be one of the most enigmatic chronic diseases with only very slow progress in the understanding of susceptibility, pathogenesis, and risk factors for progression and severity. Treatment options remain limited and prevention efforts are elusive.

The Lancet will dedicate a special issue to asthma in September, 2010, to coincide with the European Respiratory Society (ERS) Congress to be held in Barcelona, Spain, Sept 18–22. We are particularly interested in randomised controlled clinical trials but will consider any other high-quality original research papers that will substantially advance the understanding of this disorder. If your paper describes research that will be presented at the ERS Congress and is under embargo, please let us know the date and time of presentation. If your paper is accepted by *The Lancet*, online publication can be scheduled to coincide with the presentation.

To respond to the call for papers, please submit your paper via our online submission system stating in your covering letter that the submission is in response to this call for papers. The deadline for submissions is April 30, 2010.

Sabine Kleinert
The Lancet, London, NW1 7BY, UK
